The Morning Brief

JUNE 10, 2026

Strike & Print

An Apache downing reset the Iran de-escalation framing and reversed Monday's chip recovery as the May CPI release becomes the binding catalyst.

S&P 500	NASDAQ	WTI (USO)	MAY CPI	FEAR & GREED
$737.05 ↓0.29%	$707.83 ↓1.15%	$131.30 ↓2.85%	7:30 AM CT · 4.2% est YoY	~43 CNN · Drop fallback 9 (Crypto)

SECTION 01

Markets

TUESDAY REVERSED MONDAY'S CHIP RECOVERY WITH THE NASDAQ PROXY ↓1.15% TO $707.83 AND THE S&P 500 PROXY ↓0.29% TO $737.05 PER THE DATA DROP — THE INTRADAY SWING WAS MATERIAL, WITH THE NASDAQ PROXY PRINTING $725.66 EARLY AND $686.37 LATE AS NEWS OF THE U.S. APACHE HELICOPTER DOWNING NEAR THE STRAIT OF HORMUZ PER NPR AND CBS NEWS REPRICED THE DE-ESCALATION FRAMING THAT MONDAY'S BRIEF HAD ANCHORED

Sector participation inverted from Monday's tech-led tape: Real Estate (XLRE ↑2.13%) led the green tally alongside Materials (XLB ↑1.62%), Healthcare (XLV ↑1.26%), Staples (XLP ↑1.24%), Industrials (XLI ↑1.13%), and Utilities (XLU ↑1.06%) per the data drop, while Energy (XLE ↓1.61%) and Tech (XLK ↓1.85%) carried the red. TLT ↑0.59% to $85.12 priced a measurable flight-to-safety bid; UVXY (VIX proxy) ↑2.31% to $30.54 expanded the implied vol heading into today's CPI release. Within FCI, Tuesday's top movers were SUPV ↑5.48%, CRDO ↑5.42% to $234.32 (recovering from the post-print drawdown), HRMY ↑5.28%, TOL ↑5.09% on the Keefe Bruyette & Woods upgrade per Fintel, SYK ↑4.14% to $314.01, and DGX ↑3.71%; the drag concentrated in semis and crypto-adjacent: MRVL ↓7.61% to $266.88 (giving back the prior session's recovery), BKH ↓6.11%, HUT ↓5.81%, QCOM ↓5.67% to $205.42, COIN ↓4.08%, MARA ↓3.41%, FTNT ↓3.25%, AMD ↓3.02%. NVDA held essentially flat at ↓0.22% to $208.19 despite the broader semi pressure.

GOLD (GLD ↓1.63% TO $390.78) FELL TO AN APPROXIMATELY 11-WEEK LOW PER REUTERS DESPITE THE FRESH IRAN HOSTILITIES AND SILVER (SLV ↓4.17% TO $59.01) CARRIED A MATERIAL DECLINE, WHILE WTI (USO ↓2.85% TO $131.30) AND BRENT (BNO ↓2.76% TO $50.46) COMPRESSED AGAINST THE STRIKE BACKDROP — THE PATTERN IS COUNTERINTUITIVE TO A CLEAN RISK-OFF AND IS CONSISTENT WITH HORMUZ-DISRUPTION PREMIUM HAVING BEEN DRAINED FROM THE CURVE ACROSS PRIOR WEEKS' DE-ESCALATION FRAMING RATHER THAN BUILT

Per Reuters Tuesday, oil moved volatile on renewed US-Iran fighting with low stockpiles underpinning prices; per the data drop's economic calendar, EIA Crude Oil Stocks consensus sits at −4M against a −7.97M prior at 8:30 AM CT (after the CPI release). For FCI, the Energy sleeve participated in the compression: DVN ↓2.24% to $44.07, VLO ↓1.78% to $253.78, CVX ↓1.31% to $186.76, CNX ↓1.22%, OKE ↓0.41% per the data drop. Defense reasserted as the de-escalation framing reversed: LMT ↑1.93% to $530.13 and GD ↑1.41% to $345.68 both extended on the renewed conflict cadence. The bond market priced the cross-currents: TLT ↑0.59% to $85.12 reflected the safety bid against the strike news, but the 2.31% UVXY expansion frames implied vol pricing the CPI release as the binding catalyst rather than the geopolitical escalation alone.

S&P 500 (TUE)	$737.05 · ↓0.29% · L:$722.59
NASDAQ (TUE)	$707.83 · ↓1.15% · L:$686.37
RUSSELL 2K (TUE)	$285.02 · ↑0.32%
UVXY (VIX PROXY)	$30.54 · ↑2.31%
XLK (TECH)	$180.77 · ↓1.85%
XLRE (REAL ESTATE)	$44.97 · ↑2.13% · led
MRVL · QCOM	↓7.61% · ↓5.67%
GOLD (GLD)	$390.78 · ↓1.63% · 11-wk low
TLT (20Y)	$85.12 · ↑0.59%
MAY CPI	7:30 AM CT · 4.2% YoY est

MAY CPI RELEASES AT 7:30 AM CT WITH BLS CONSENSUS FRAMING A 0.5% HEADLINE MONTH-OVER-MONTH PRINT AND A 0.3% CORE MONTH-OVER-MONTH PRINT PER THE DATA DROP, AGAINST A 0.6% AND 0.4% PRIOR — HEADLINE YOY CONSENSUS AT 4.2% PER FACTSET WOULD MARK A NOTABLE STEP-UP FROM THE 3.8% APRIL READING AND, PER CBS NEWS AND CNBC COVERAGE OF ECONOMIST SURVEYS, WOULD REPRESENT THE FIRST HEADLINE PRINT NORTH OF 4% SINCE MAY 2023

Per CNBC and Kiplinger coverage citing the Dow Jones consensus, the headline acceleration reflects the energy pass-through from the Iran-conflict-driven oil complex. Per the FactSet Consumer Price Index forecast Tuesday, the May print is projected at 4.2% YoY. For FCI, the read-through is two-fold: a hot headline with a softer core would reinforce the "hot growth, cooling labor, energy-driven inflation" framing the prior briefs anchored, while a hot core would meaningfully harden the rate-path conversation into the June 16–17 FOMC meeting. Per the Federal Reserve's published calendar, the FOMC carries the Chair's press conference and the updated Summary of Economic Projections. The dividend backbone (SYK ↑4.14% Tuesday to $314.01, DGX ↑3.71%, GPC ↑2.41%, LMT ↑1.93% to $530.13, GD ↑1.41%, CHD ↑1.76%) is positioned to compound through whichever way the print resolves.

A reversed-de-escalation tape into the binding CPI release frames the next 24 hours as a multi-variable resolution rather than a single-catalyst window — the position-unwind framework from Monday's brief appears to have re-asserted. **Avoid Erosion.**

Geopolitics

A U.S. ARMY APACHE HELICOPTER WAS DOWNED NEAR THE STRAIT OF HORMUZ MONDAY EVENING AFTER A COLLISION WITH AN IRANIAN DRONE PER NPR AND CBS NEWS — TRUMP ANNOUNCED THE U.S. WOULD RESPOND AND U.S. CENTRAL COMMAND CONFIRMED STRIKES BEGAN AT APPROXIMATELY 5 PM TUESDAY ON IRANIAN AIR DEFENSE, GROUND CONTROL STATIONS, AND SURVEILLANCE RADAR SITES NEAR THE STRAIT — IRAN RESPONDED WITH DRONE STRIKES AGAINST U.S. INSTALLATIONS IN BAHRAIN, KUWAIT, AND JORDAN PER REUTERS, WITH MOST INTERCEPTED PER INITIAL ASSESSMENTS

The exchange materially reverses the Monday brief's framing that the Trump-described U.S.-Iran deal was in "final throes" per Al Jazeera, with the de-escalation premium that had drained from the oil complex across prior sessions now reasserting at the margin overnight. Per Reuters Tuesday evening, oil moved volatile on renewed US-Iran fighting with low inventories underpinning prices; the cash session, however, finished with WTI (USO) ↓2.85% to $131.30 and Brent (BNO) ↓2.76% to $50.46 per the data drop, reflecting the muted reaction in the dated oil tape against the structural premium that had already compressed over recent weeks. For FCI energy exposure, the sleeve carried the compression Tuesday: DVN ↓2.24% to $44.07, VLO ↓1.78% to $253.78, CVX ↓1.31% to $186.76, CNX ↓1.22%, OKE ↓0.41%. Defense reasserted on the renewed conflict cadence: LMT ↑1.93% to $530.13 and GD ↑1.41% to $345.68 both extended through the session, consistent with the structural backlog thesis the prior briefs anchored.

THE TRUMP-FRAMED 60-DAY MEMORANDUM OF UNDERSTANDING PER AXIOS AND CBS NEWS REPORTING ACROSS PRIOR WEEKS — WHICH WAS TO COVER AN UNRESTRICTED HORMUZ REOPENING, IRANIAN OIL EXPORT NORMALIZATION, AND A NEGOTIATION TRACK ON THE NUCLEAR PROGRAM — NOW SITS UNDER MATERIAL STRESS WITH THE STRIKE EXCHANGE ON THE RECORD, ALTHOUGH NEITHER SIDE HAS WITHDRAWN FORMALLY FROM THE FRAMEWORK PER REUTERS AS OF THIS WRITING

Per CBS News and prior Axios coverage of the draft framework, Trump had previously sent the MOU back to Tehran with amendments specifying timing on Iranian performance of nuclear commitments and the immediate end of Iranian control over the strait upon signing; the public posture as recently as Monday was that signing could occur within days. The strike exchange reframes the cost-of-failure calculus on both sides without formally closing the diplomatic window. Per Reuters, the European policy track and the prior Israel-Lebanon ceasefire implementation framework remain scheduled to reconvene the week of June 22 per the State Department's prior communication. For FCI, the position-symmetric framework Carson anchored Monday remains the operative posture: the sleeve carries durable cash-flow exposure to either a sustained-disruption scenario (Energy, Defense) or a normalizing scenario (broad portfolio recovery), held through cycle rather than gated to any single diplomatic window. **The physical world matters.**

APACHE DOWNED	Near Hormuz Mon eve per NPR/CBS
U.S. STRIKES	5 PM Tue · Air defense per CENTCOM
IRAN RETALIATION	Bahrain, Kuwait, Jordan per Reuters
WTI (USO TUE)	$131.30 · ↓2.85%
BRENT (BNO TUE)	$50.46 · ↓2.76%
LMT · GD (TUE)	$530.13 ↑1.93% · $345.68 ↑1.41%
GOLD (GLD)	$390.78 · ↓1.63% · 11-wk low
MOU STATUS	Under stress · no formal withdrawal

On Our Radar

1. May CPI at 7:30 AM CT today remains the binding catalyst of the week per the BLS Release Schedule, with consensus framing a 0.5% headline month-over-month print (vs 0.6% prior) and a 0.3% core month-over-month print (vs 0.4% prior) per the data drop — headline YoY consensus at 4.2% per FactSet would mark an acceleration from the 3.8% April reading and, per CBS News and CNBC coverage of economist surveys, would represent the first headline print north of 4% since May 2023. The split between a hot energy-driven headline and a cooler core would reinforce the prevailing "hot growth, cooling labor, energy-driven inflation" framing; a hot core would meaningfully harden the rate-path conversation into the June 16–17 FOMC meeting per the Federal Reserve's published calendar. The dividend backbone (SYK ↑4.14% Tuesday to $314.01, DGX ↑3.71% to $204.53, GPC ↑2.41% to $99.41, CHD ↑1.76%, LMT ↑1.93%) is positioned to compound through whichever way the print resolves. *Research Reveals Opportunities.*

2. The Apache helicopter downing per NPR and CBS News and the subsequent U.S. strike exchange near Hormuz reframe the Trump-described U.S.-Iran "final throes" framing the Monday brief anchored — the Mahshahr-strike precedent and the broader Hormuz-disruption dynamic per prior weeks' coverage are now back on the working table as live variables rather than tail risks. Per Reuters Tuesday, Iran responded with drone strikes on U.S. installations in Bahrain, Kuwait, and Jordan with most intercepted per initial assessments; the dated oil tape (USO ↓2.85%, BNO ↓2.76% per the data drop) did not extend Tuesday's prior premium, but per Reuters overnight coverage WTI traded back up approximately 1% in pre-market against the renewed exchange. For FCI, the energy sleeve (DVN, CVX, VLO, CNX, OKE) sits constructively against either a re-escalation premium or a normalization scenario through structural cash flows; defense (LMT, GD) participated in Tuesday's repricing of the conflict cadence. *Think Like an Owner.*

3. Oracle reports Q4 fiscal 2026 after today's close per Oracle's Investor Relations calendar with consensus at $2.00 EPS on approximately $19.10B revenue per Stocktitan and Alphastreet coverage — the $553B Remaining Performance Obligations balance per the Q3 release marks the first material conversion test for the AI-cloud thesis under the new disclosure cadence. Per the company's prior IR communication, Q4 total revenues are guided 18–20% in constant currency with Cloud revenue 44–48% in constant currency. The print sits as the binding earnings-side variable into Adobe Thursday after the close, with consensus near $5.83 EPS per Yahoo coverage. *Research Reveals Opportunities.*

4. The Tuesday semiconductor reversal — MRVL ↓7.61% to $266.88 giving back essentially the entirety of Monday's recovery, QCOM ↓5.67% to $205.42 with the intraday low at $192.67, AMD ↓3.02% to $475.50 with an intraday low at $437.23, and NXPI ↓1.24% to $297.41 per the data drop — reasserts the position-unwind framework rather than confirming Monday's recovery as durable. CRDO held against the broader pattern with ↑5.42% to $234.32 on idiosyncratic positive flow per Benzinga coverage, and NVDA was essentially flat at ↓0.22% to $208.19 against the broader semi pressure. TSM closed marginally green at ↑0.26% to $427.92. The pattern across two sessions frames Monday's recovery as a positioning bounce rather than a thesis re-rating; the CPI print today is the binding macro variable into whether the chips sleeve consolidates or extends the drawdown. *Avoid Erosion.*

5. The defensive complex (Real Estate, Materials, Healthcare, Staples, Industrials, Utilities) inverted Monday's laggard tally to lead Tuesday's green sectors per the data drop — XLRE ↑2.13%, XLB ↑1.62%, XLV ↑1.26%, XLP ↑1.24%, XLI ↑1.13%, XLU ↑1.06%. The pattern is consistent with the flight-to-safety dynamic that TLT ↑0.59% to $85.12 separately priced and the 2.31% UVXY expansion implied. For FCI, the dividend sleeve's sectoral positioning (CAT, GD, LMT, ABT, SYK, DGX, ATO, NEE) sits naturally against the rotation; per the data drop, ABT ↑0.83% to $91.25, SYK ↑4.14% to $314.01, DGX ↑3.71%, LMT ↑1.93%, CHD ↑1.76%, and CL ↑2.01% carried the sleeve contribution. *Simplicity Over Complexity.*

6. Carson's active SPY $645.80 support remains untouched per the data drop — Tuesday's S&P 500 proxy intraday low printed at $722.59 against the $737.05 close, leaving Carson's level approximately 10.7% below Tuesday's deepest print. The framework remains the committee's reference for a sustained retracement scenario rather than an actionable near-term marker. Per the data drop's sentiment line, the crypto Fear & Greed at 9 (Extreme Fear) reflects the CNN endpoint fallback noted in the workflow; CNN's most recent published stock-market gauge sits near 43 (Fear) per prior coverage, framing the equity-sentiment picture meaningfully above the crypto fallback. Today's CPI print is the dominant near-term catalyst; the June 16–17 FOMC remains the binding macro anchor per the Fed's published calendar. *The physical world matters.*
