THE WEEK'S DOMINANT MACRO DEVELOPMENT REPORTEDLY READ THROUGH WEDNESDAY'S FEDERAL RESERVE RATE DECISION — PER THE FEDERAL RESERVE STATEMENT AND COVERAGE FROM CNBC, REUTERS, YAHOO FINANCE, AND KIPLINGER, THE FOMC REPORTEDLY VOTED UNANIMOUSLY

12–0 TO RAISE THE FEDERAL FUNDS TARGET RANGE BY 25 BASIS POINTS TO 3.75%–4.00%, THE FIRST RATE HIKE SINCE JULY 2023, WITH THE SUMMARY OF ECONOMIC PROJECTIONS MEDIAN DOT REPORTEDLY POINTING TO APPROXIMATELY ONE ADDITIONAL QUARTER-POINT MOVE BY YEAR-END PER CNBC AND WOLF STREET; PER CNBC AND KIPLINGER COVERAGE OF FED FUNDS FUTURES, TRADERS REPORTEDLY PRICED APPROXIMATELY 42% ODDS OF TWO ADDITIONAL HIKES; PER YAHOO FINANCE AND USAGOLD COVERAGE, PRECIOUS METALS REPORTEDLY REBOUNDED POST-FED WITH GOLD REPORTEDLY ADDING APPROXIMATELY 0.7% AND SILVER APPROXIMATELY 3% ON THE WEEK AS THE DOLLAR REPORTEDLY SOFTENED

Per the Federal Reserve statement and coverage from CNBC, Reuters, Yahoo Finance, and Kiplinger, the FOMC reportedly voted unanimously 12–0 Wednesday to raise the federal funds target range by 25 basis points to 3.75%–4.00% — the first move higher since July 2023 — and per CNBC and Wolf Street coverage of the Summary of Economic Projections, the median 2026 dot reportedly points to approxim-

ately one additional quarter-point move by year-end with 16 of 18 participants reportedly expecting at least one more hike in 2026. Per CNBC and Kiplinger coverage of CME Fed-Watch and Fed funds futures, market pricing reportedly implied approximately 42% odds of two additional hikes rather than the median-dot one-more path, framing a modestly hawkish market read relative to the SEP. Per Yahoo Finance, USAGold, and Rio Times Online coverage, gold reportedly closed the week at approximately \$4,380 per ounce with a reported weekly gain of approximately 0.73% and silver at approximately \$66.35 with a reported weekly gain of approximately 3.05% as the dollar reportedly softened following the Fed decision; per data drop, GLD closed Friday at \$401.17 (↑0.71%) and SLV at \$59.93 (↑1.63%). Per Yahoo Finance cov-

erage carried in the data drop holdings news, one piece reportedly framed the SEC as approving a tokenized-stock framework with caveats, consistent with Friday's reported digital-asset advance across IBIT, ETHA, HOOD, and MARA. For FCI positioning, the composition — a first rate hike since 2023 with a hawkish dot plot, a Dow reportedly extending a three-week losing streak, a Nasdaq holding its weekly lift on selective technology leadership, and a Friday digital-asset breakout on the reported tokenized-stock framework — keeps the FCI Dividend-Strategy and Growth-Hybrid sleeves reading through the intersection of the reframed rate path, the digital-asset flow reversal, and the reported chip-complex rebound into the Trump-Xi week ahead.

A week where the Federal Reserve reportedly delivered its first hike since 2023 alongside a hawkish dot plot, the Dow reportedly extended a three-week losing streak, and digital assets reportedly advanced broadly into Friday's close tends to reward reading each driver separately rather than compositing a single directional view. Simplicity over complexity.
