SECTION 01

Markets — Week in Review

THE WEEK CLOSED WITH THE S&P 500 AT 7,431.46 ↑0.5% FRIDAY AND APPROXIMATELY ↑1.6% ON THE WEEK PER ADVISOR PERSPECTIVES AND SCHWAB COVERAGE, MARKING MULTIPLE FRESH RECORD HIGHS DESPITE WEDNESDAY’S SHARP DRAWDOWN ON THE US-IRAN STRIKE-EXCHANGE ESCALATION AND THE HOT MAY CPI/PPI PRINTS — THE PIVOT CAME THURSDAY WHEN PRESIDENT TRUMP CANCELLED PLANNED EVENING STRIKES AND DESCRIBED A “GREAT SETTLEMENT” CLOSE TO SIGNING PER CNBC, COMPRESSING THE VOLATILITY COMPLEX AND DRIVING ONE OF THE STRONGEST SEMICONDUCTOR-SLEEVE SESSIONS OF THE CYCLE

Friday continued the de-escalation trade: the Dow added 353.51 points to 51,202.26 (↑0.7%) and the Nasdaq Composite closed at 25,888.84 (↑0.31%) per The Washington Post and TheStreet coverage, with leadership rotating from defensives back into AI-infrastructure, materials, and small-caps (the Russell 2000 led intraday per Schwab). The week’s framing crystallized around three cross-currents the prior briefs anchored: the hot energy-driven inflation complex (May CPI ↑4.2% YoY and May PPI ↑1.1% MoM/↑6.5% YoY per the BLS releases, principally a wholesale-gasoline pass-through per the Bureau’s own framing), the geopolitical de-escalation track (Brent reportedly approached \$88/bbl Friday, the lowest in roughly two months per Trading Economics), and the durable AI capex thesis (Oracle’s record \$19.2B Q4 print Wednesday and Adobe’s record \$6.62B Q2 print Thursday with AI-first ARR tripling YoY per the company releases). The FCI growth and supplier sleeves participated meaningfully in Thursday’s reversal, recovering the majority of Wednesday’s compression in a single session per the data drop covered in the prior brief.

S&P 500 (FRI CLOSE)	7,431.46 · ↑0.5% · ~↑1.6% on the week
DOW JONES (FRI CLOSE)	51,202.26 · ↑353.51 pts (↑0.7%)
NASDAQ COMPOSITE (FRI CLOSE)	25,888.84 · ↑0.31%
SPACEX (SPCX) IPO DEBUT	\$160.95 close · ↑19% from \$135 offer · intraday high \$176.52
BRENT CRUDE (FRI)	~\$88/bbl · lowest in ~2 months per Trading Economics
BITCOIN (SAT LIVE)	~\$63,500 · range-bound into weekend
MAY CPI · MAY PPI	4.2% YoY · 6.5% YoY headline per BLS
FOMC WINDOW	Jun 16–17 · ~99% hold per CME FedWatch

THE JUNE 16–17 FOMC MEETING IS THE BINDING NEAR-TERM MACRO ANCHOR AND WILL BE KEVIN WARSH'S FIRST MEETING AS FED CHAIR PER MULTIPLE OUTLETS — THE CME FEDWATCH-IMPLIED PROBABILITY OF HOLDING THE TARGET RANGE AT 3.50–3.75% SITS NEAR 99% PER INDEXBOX AND POLYMARKET COVERAGE, FRAMING THE MEETING AS PRIMARILY A LANGUAGE AND DOT-PLOT EVENT RATHER THAN A RATE-DECISION EVENT

Per IndexBox coverage, the May CPI ↑0.5% MoM and ↑4.2% YoY headline print (the hottest annual read since April 2023) combined with the May PPI release Thursday at ↑1.1% MoM and ↑6.5% YoY frames a hardened producer-side inflation backdrop, even with the gasoline pass-through driving the bulk of the goods component per the BLS release. The bias-shift question — from a previously eased posture toward a neutral or modestly tightening stance — carries direct implications for FCI's rate-sensitive sleeves: the dividend backbone (TLT, defensive consumer, utilities), the digital ETFs (IBIT, ETHA), and the high-multiple growth holdings (NVDA, AMD, CRDO, MRVL, FTNT) that price the Fed-path conversation most directly. The position-symmetric framework Carson has anchored over recent weeks remains operative: cash-flow durable holdings carry the framework against the hardened rate path, while the AI-infrastructure backbone retains the structural-demand tailwind from the Oracle/Adobe disclosure complex.

A week of cross-currents resolved upward as de-escalation framing compressed the geopolitical premium and reasserted the AI-infrastructure backbone; the cash-flow durable sleeves continue to anchor the portfolio into next week's FOMC and any incremental Iran settlement detail. Avoid Erosion.

Geopolitics — Weekend Signing Window

THE US-IRAN MEMORANDUM OF UNDERSTANDING IS REPORTEDLY POSITIONED FOR A WEEKEND SIGNING CEREMONY IN EUROPE — LIKELY GENEVA PER CBC AND AXIOS COVERAGE — WITH VICE PRESIDENT JD VANCE LEADING THE US DELEGATION AND IRAN'S PARLIAMENT SPEAKER MOHAMMAD BAQER QALIBAF REPORTEDLY THE LIKELY IRANIAN SIGNATORY PER REUTERS-SOURCED WESTERN OFFICIALS; PAKISTAN'S PRIME MINISTER STATED THE FINAL TEXT HAD BEEN AGREED UPON PER THE LIVE COVERAGE, BUT IRAN'S FOREIGN MINISTRY SAID VIA IRNA THAT NO FINAL DECISION HAD BEEN REACHED AS OF THURSDAY EVENING, AND PER THE HILL THE US DOMESTIC RESPONSE INCLUDES MATERIAL SKEPTICISM AT THE EDGES

Per Axios, the MOU is structured as an initial framework rather than a comprehensive nuclear deal: a 60-day ceasefire extension (including Lebanon), reopening of the Strait of Hormuz without tolls, Iranian mine-clearing in the strait, a U.S. sanctions-waiver framework permitting freer Iranian oil sales, and the opening of a separate negotiation track on the nuclear program with the uranium-stockpile question deferred to a second, more detailed accord. The position-symmetric framework Carson anchored across the prior briefs remains operative through this weekend: if a signing materializes, the FCI energy sleeve (DVN, CVX, OKE, VLO, CNX) carries the structural compression as the Brent premium drains; if the signing slips or terms break down, the same sleeve carries the structural-disruption hedge. The defense sleeve (LMT, GD) holds the long-cycle backlog framework regardless of the near-term diplomatic resolution, per the prior brief's coverage of the GD Jefferies upgrade and the broader Pentagon production-ramp commentary. **The physical world matters.**

OIL CARRIED THE DE-ESCALATION TAPE THROUGH FRIDAY WITH BRENT REPORTEDLY APPROACHING \$88/BBL AT INTRADAY LOWS PER TRADING ECONOMICS, THE LOWEST LEVEL IN ROUGHLY TWO MONTHS, EVEN AS THE MAY PPI PRINT THURSDAY CONFIRMED THE PRIOR WEEK'S WHOLESALE-GASOLINE PASS-THROUGH AT $\uparrow 23.4\%$ PER THE BLS RELEASE — THE FORWARD CURVE NOW PRICES A POTENTIAL HORMUZ-REOPEN SUPPLY UNWIND IF THE WEEKEND SIGNING HOLDS, AGAINST WHICH THE FCI ENERGY SLEEVE'S CASH-FLOW DURABILITY (DVN'S 70% SHAREHOLDER-RETURN FRAMEWORK, CVX'S DIVIDEND COMPLEX, OKE'S MIDSTREAM STABILITY) CARRIES THE FRAMEWORK

Per CNBC and Trading Economics coverage, the price action across the week tracked the diplomatic cadence with high fidelity: Tuesday's strike-escalation drove the Brent complex up sharply, Wednesday extended the move, Thursday's Trump cancellation reversed it $\downarrow 4\%+$, and Friday continued the compression. The digital-asset complex stayed range-bound through the week with Bitcoin trading near \$63,500 on Saturday morning per CoinDesk, holding the recent trading range as the SpaceX IPO debut Friday absorbed incremental retail flow per Yahoo coverage. Gold and silver participated in Thursday's reversal but enter the weekend with the rate-path conversation hardened by the dual hot inflation prints, leaving the metals complex caught between the geopolitical-premium release and the higher-real-yield compression. For FCI's metals-adjacent exposure (AEM,

FCX), the framework remains anchored on the long-cycle physical-asset thesis rather than near-term cross-asset volatility.

SIGNING VENUE	Likely Geneva · possibly Sunday per CBC
U.S. DELEGATION LEAD	VP JD Vance per Axios/CNBC
IRAN LEAD (REPORTED)	Parliament Speaker Qalibaf per Reuters sources
IRAN POSITION (THU)	"No final decision" per IRNA
FRAMEWORK	60-day ceasefire · Hormuz reopen · sanctions waivers per Axios
NUCLEAR TRACK	Deferred to second accord per Axios
BRENT (FRI)	~\$88/bbl · ~2-month low per Trading Economics
FCI ENERGY SLEEVE	Position-symmetric framework operative either side

On Our Radar

1. Week Ahead — FOMC June 16–17 anchors the calendar, with Kevin Warsh chairing his first meeting per multiple outlets and CME FedWatch implying roughly a 99% probability of holding the target range at 3.50–3.75% per IndexBox and Polymarket coverage. The dot plot, the bias-shift language, and the Warsh-led press conference carry the binding macro signal rather than the rate decision itself. Per IndexBox, the May CPI ↑4.2% YoY (the hottest annual print since April 2023) and the May PPI ↑6.5% YoY release frame the inflation backdrop heading in — the question for the committee tape is whether the energy-driven goods component is allowed to fade naturally or treated as broader signal. For FCI's rate-sensitive sleeves, the meeting language is the principal cross-asset variable into next week. *Avoid Erosion.*

2. The Iran framework signing window is the dominant weekend catalyst. Per CBC and Reuters-sourced Western officials, the signing could occur as soon as Sunday with VP Vance and Iran's parliament speaker reportedly the likely signatories at a Geneva venue. Per The Hill, the domestic-political response carries material skepticism; per IRNA via Reuters, Iran's Foreign Ministry had not confirmed final approval as of Thursday evening. A signed MOU would likely compress the Brent premium further and frame the FCI energy sleeve's near-term tape against the cash-flow durability of the holdings (DVN's 70% return framework, CVX's dividend complex, OKE's midstream stability). A signing slip would leave the position-symmetric framework operative as the structural-disruption hedge. *Think Like an Owner.*

3. SpaceX's debut on the Nasdaq Friday under SPCX priced at \$135, opened at \$150, closed at \$160.95 (↑19% from offer per CNBC), and traded as high as \$176.52 intraday (↑31% from offer per multiple outlets) — the after-hours print extended the move with shares reported near \$166.76 per CNBC, lifting the market capitalization toward approximately \$2.2 trillion at the after-hours peak (against roughly \$2.1 trillion implied by the close) and confirming the offering as the largest IPO on record. Per Yahoo and CNBC coverage, the structurally unusual fixed-price offering absorbed substantial retail and institutional flow without saturating the bid. The read-through for FCI's AI-infrastructure-adjacent exposure (CRDO, KEYS, MRVL, NVDA, FTNT, NXPI) and the digital-asset sleeve (IBIT, ETHA) is constructive on the broader risk-asset bid into Monday's open; SpaceX's public liquidity creates a new comparator for the AI-build-out cohort. *Research Reveals Opportunities.*

4. Carson's active SPY \$645.80 support remains untouched. The week's S&P 500 proxy range carried materially above the level even at Wednesday's drawdown low, leaving Carson's framework as the committee's reference for a deeper retracement scenario rather than an actionable near-term marker. With the index closing the week at fresh highs and the de-escalation tape compressing implied volatility into the FOMC and the Iran signing window, Carson's level continues to define the committee's downside reference in the position-symmetric framework. Per the prior brief, the CNN Fear & Greed gauge was 37 (Fear) heading into Friday per the live CNN endpoint, framing the rally as occurring against still-cautious sentiment positioning rather than euphoric flow. *Simplicity Over Complexity.*
