The Morning Brief

SEPTEMBER 11, 2026

CPI Test

Fourth consecutive US index down day extends into the August CPI print as Brent trades above \$105, LRCX leads a chip-equipment fade, and Oracle jumps roughly 7% after-hours on a \$19.35B revenue beat and a \$664B RPO backlog.

S&P 500 (SPY, THU CLOSE)	BRENT (LIVE) / WTI (USO, THU)	BITCOIN (LIVE, FRI AM)	ORACLE (ORCL, AH)	FEAR & GREED (CNN)
\$757.83 · ↓0.60% Thu · 4th consecutive down day	~\$106 per Trading Economics · USO \$158.38 ↑5.61%	~\$77.1K per CaptainAltcoin/ Fortune tape	~+7% AH on \$19.35B rev beat, \$664B RPO	~35 · Fear (drop crypto fallback of 56)

SECTION 01

Markets — Fourth Red Session Into a CPI-and-Rate-Path Window With Oracle Reframing the AI-Cloud Backlog

THURSDAY'S CASH SESSION EXTENDED THE POST-PAYROLLS FADE INTO A FOURTH CONSECUTIVE DOWN DAY FOR THE MAJOR US INDEXES PER DATA DROP AND INVESTING.COM/FXSTREET COVERAGE — SPY CLOSED \$757.83 (↓0.60%), QQQ \$708.69 (↓1.06%), DIA \$520.75 (↓0.63%), AND IWM \$287.70 (↓1.01%) PER DATA DROP — WITH BRENT TRADING ABOVE \$105 PER BARREL PER TRADING ECONOMICS COVERAGE OF THE WEDNESDAY OVERNIGHT TAPE, THE AUGUST PPI LANDING AT ↑0.4% MONTH-OVER-MONTH AND ↑5.4% YEAR-OVER-YEAR (ENERGY ↑4.2%, DIESEL ↑24.1%) PER THE BLS RELEASE, AND THE ECB RAISING ITS DEPOSIT RATE 25 BASIS POINTS TO 2.50% WITH PRESIDENT LAGARDE PUBLICLY DESCRIBING THE DECISION AS CLEAR-CUT AND UNANIMOUS PER EURONEWS AND BLOOMBERG COVERAGE

Per data drop, Thursday's cash session closed with SPY at \$757.83 (↓0.60%), QQQ at \$708.69 (↓1.06%), DIA at \$520.75 (↓0.63%), IWM at \$287.70 (↓1.01%), and UVXY (VIX proxy) at \$19.33 (↑5.17%). Per FXStreet coverage of the Friday pre-open tape, this marked the fourth consecutive daily decline for the three major US averages, and per data drop, TLT (20Y Bond proxy) closed ↓1.16% at \$80.78 as long-end yields remained elevated. Per the BLS August PPI release, final-demand PPI rose 0.4% month-over-month in line with the Dow Jones consensus, with the unadjusted 12-month change at ↑5.4%; over three-fourths of the broad-based rise reportedly traced to final-demand energy (↑4.2%), and per BLS diesel prices jumped 24.1%. Per Euronews and Bloomberg coverage, the ECB raised its deposit rate by 25 basis points to 2.50% with President Lagarde describing the decision as clear-cut and unanimous and leaving the door open for further tightening as the energy shock tied to the Middle East conflict continues to push Eurozone inflation higher. Per data drop sentiment field, the CNN Fear & Greed reading of 56 "Greed" reflects the CNN endpoint falling back to the crypto Fear-and-Greed index; per MacroMicro coverage of the CNN stock-market read, the actual CNN Fear & Greed sits near approximately 35 "Fear" heading into today's August CPI print.

S&P 500 (SPY, THU CLOSE)	\$757.83 · ↓0.60% Thu
NASDAQ (QQQ) / DOW (DIA)	\$708.69 ↓1.06% / \$520.75 ↓0.63%
WTI (USO) / BRENT (LIVE)	\$158.38 ↑5.61% / ~\$106 per Trading Economics
GOLD (GLD) / SILVER (SLV)	\$396.36 ↓1.73% / \$57.50 ↓5.30% Thu
IBIT / ETHA (THU CLOSE)	\$43.68 ↓1.38% / \$18.56 ↓0.11%
BITCOIN (LIVE, FRI AM)	~\$77.1K per CaptainAltcoin tape
TLT / UVXY (THU CLOSE)	\$80.78 ↓1.16% / \$19.33 ↑5.17%
MARQUEE PRINTS	Aug CPI Fri 8:30 ET · ORCL AH beat · ADBE AH mixed

THE SECTOR COMPOSITION ON THURSDAY READ AS A BROADENING FADE CONCENTRATED IN CHIP-EQUIPMENT, PRECIOUS-METALS-MINER, AND CYCLICALS-RATE-SENSITIVE LAYERS — COMM SERVICES (XLC ↑0.60%) WAS THE SOLE GREEN SECTOR WITH STAPLES (XLP ↑0.05%) FLAT, WHILE TECH (XLK ↓1.41%), MATERIALS (XLB ↓1.23%), UTILITIES (XLU ↓0.98%), REAL ESTATE (XLRE ↓0.83%), AND INDUSTRIALS (XLI ↓0.72%) LED THE FADE PER DATA DROP; FCI TOP MOVERS — NXPI ↑1.41%, LMT ↑1.08%, FTNT ↑1.04%, ADP ↑0.80%, PCAR ↑0.57% PER DATA DROP — WHILE FCX ↓6.59%, LRCX ↓5.65%, HUT ↓5.55%, CRDO ↓4.53%, AND MARA ↓4.11% CONCENTRATED THE BOTTOM GROUP IN COPPER, AI CHIP-EQUIPMENT, BITCOIN MINERS, AND AI NETWORKING

Per data drop sector map, XLC closed ↑0.60% and XLP ↑0.05% as the only green sectors, with the fade extending through XLF (↓0.33%), XLY (↓0.44%), XLV (↓0.55%), XLE (↓0.58%), XLI (↓0.72%), XLRE (↓0.83%), XLU (↓0.98%), XLB (↓1.23%), and XLK (↓1.41%). Per data drop top-movers, NXPI closed ↑1.41% at \$226.47 following its Goldman Sachs

Communacopia + Technology Conference presentation per SeekingAlpha coverage carried in the data drop, LMT ↑1.08% at \$530.12, FTNT ↑1.04% at \$158.85, ADP ↑0.80% at \$267.33, and PCAR ↑0.57% at \$122.57. Per data drop bottom-movers, FCX closed ↓6.59% at \$71.21 with Yahoo Finance coverage in the data drop framing a Grasberg ramp-up and US copper growth from leaching story, LRCX ↓5.65% at \$298.01 with Benzinga coverage in the data drop citing a UBS rating action, an insider sale, and rising yields as weight, HUT ↓5.55% at \$90.60, CRDO ↓4.53% at \$160.31 following its Goldman Sachs Communacopia + Technology Conference presentation per SeekingAlpha coverage and Benzinga coverage of a director's \$644K stock sale, and MARA ↓4.11% at \$11.43. Per data drop, additional AI-semi weakness included AMD ↓3.36% at \$503.60, MRVL ↓3.43% at \$226.96, NVDA ↓2.37% at \$218.36, and TSM ↓1.68% at \$428.03, with CEG (↓2.70% at \$285.97 after Yahoo Finance coverage of the announced \$715M acquisition of the Rhode Island State Energy Center from Shell) and VST (↓2.68% at \$147.05) leading the independent-power fade. For FCI positioning, the composition — a chip-equipment-and-copper-and-miner draw-down alongside a defensive-sector rotation into Comm Services and Staples against a bond-and-yield-and-oil compound — keeps the Growth-Hybrid physical-AI-infrastructure and metals sleeves reading through the intersection of the CPI print at 8:30 AM ET today, the September 15–16 FOMC decision next Wednesday, and the Oracle after-hours beat reframing the AI-cloud demand curve.

A four-session sequence into a CPI print with Brent above \$105, a hawkish ECB hike behind, and Oracle's \$664 billion RPO stamp tends to keep the physical-AI-infrastructure and energy sleeves reading through the compound rather than break the thesis. Think like an owner.

Geopolitics — Iran-Hormuz Tanker War Extends: Reuters and Al Jazeera Report US-Iran Trading Strikes in the Persian Gulf With Brent Trading Above \$105 per Trading Economics Coverage; Oracle's After-Hours Print Reframes the AI-Cloud Demand Curve With a \$664 Billion RPO Backlog and a \$90 Billion FY27 Revenue Guide Per CNBC and 24/7 Wall St. Coverage; Canada's Counter-Tariffs Enter Their Fourth Day Per Finance Canada; the ECB Hiked 25 Basis Points to a 2.50% Deposit Rate Per Euronews and Bloomberg

IRAN AXIS: PER REUTERS AND AL JAZEERA COVERAGE OF THE THURSDAY OVERNIGHT TAPE, IRAN REPORTEDLY STRUCK US WARSHIPS AND TANKERS IN THE PERSIAN GULF WHILE THE US SAID IT HAD HIT MULTIPLE IRANIAN TANKERS, EXTENDING THE TANKER-WAR SEQUENCE BEYOND THE PRIOR REPORTED ATTACK ON THE US AIR BASE IN JORDAN; PER TRADING ECONOMICS COVERAGE OF THE THURSDAY SESSION BRENT REPORTEDLY TRADED ABOVE \$108 PER BARREL — ITS HIGHEST LEVEL SINCE MAY 19 — BEFORE EASING BACK TOWARD \$106 INTO THE FRIDAY PRE-OPEN, AND PER DATA DROP USO CLOSED $\uparrow$ 5.61% AT \$158.38 WITH BRENT PROXY BNO $\uparrow$ 6.42% AT \$63.13; OIL TANKER RATES HAVE REPORTEDLY JUMPED TO RECORD HIGHS PER TRADING ECONOMICS AND AL JAZEERA COVERAGE

Per Reuters and Al Jazeera coverage of the Thursday tape, the US and Iran continued to trade strikes in and around the Strait of Hormuz, with Iran reportedly striking US warships and tankers in the Persian Gulf while the US said it had hit multiple Iranian tankers. Per Trading Economics coverage of the Thursday session, Brent reportedly passed \$108 per barrel — its highest level since May 19 — on the escalating tanker-war compound before easing back toward approximately \$106 into the Friday pre-open. Per data drop, USO (WTI proxy) closed $\uparrow$ 5.61% at \$158.38 and BNO (Brent proxy) closed $\uparrow$ 6.42% at \$63.13, and per Trading Economics oil-tanker coverage tanker rates have jumped to record highs while US crude inventories reportedly fell 300,000 barrels in the week ended September 4. Per prior Al Jazeera coverage of Iran's Supreme National Security Council statement, Tehran had earlier indicated a restricted maritime zone around the US Navy's blockade line. For FCI positioning, the composition — a tanker-war sequence with Brent above \$105, an ECB hike explicitly tied to Middle East energy inflation, and a still-broadening kinetic map spanning maritime, US-base, and shipping-lane layers — keeps the FCI energy sleeve (CVX Thu $\downarrow$ 0.49% at \$212.76 per data drop, CNX, OKE) reading directly through the intersection of the physical-supply premium, the Iran-side kinetic variable, and the CPI-and-FOMC window.

AI-CLOUD AXIS: ORACLE'S FISCAL Q1 2027 PRINT AFTER THE THURSDAY CLOSE DELIVERED ADJUSTED EPS OF \$1.92 VS. ANALYST CONSENSUS OF \$1.74 AND REVENUE OF \$19.35 BILLION VS. \$19.14 BILLION CONSENSUS PER CNBC, 24/7 WALL ST., AND ALPHASTREET COVERAGE — WITH CLOUD INFRASTRUCTURE REVENUE REPORTEDLY UP 121% YEAR-OVER-YEAR AT \$7.39 BILLION, REMAINING PERFORMANCE OBLIGATIONS REACHING \$664 BILLION, AND FULL-YEAR FY2027 REVENUE GUIDE OF AT LEAST \$90 BILLION; ORCL SHARES REPORTEDLY JUMPED APPROXIMATELY 7% IN EXTENDED TRADING PER 24/7 WALL ST. COVERAGE — THE PRINT READS AS A DIRECT REFRAMING OF THE AI-CLOUD DEMAND CURVE INTO THE CPI WINDOW, WITH FCI'S PHYSICAL-AI-INFRASTRUCTURE AXIS (AMD, MRVL, NVDA, LRCX, CRDO, TSM, KEYS, TEL) READING DIRECTLY THROUGH THE BOOKINGS SIGNAL

Per CNBC, 24/7 Wall St., and Alphastreet coverage of Oracle's fiscal Q1 2027 results released after the Thursday close, adjusted EPS came in at \$1.92 versus the \$1.74 FactSet consensus, and revenue reached \$19.35 billion versus the \$19.14 billion consensus. Per 24/7 Wall St. and ERP Today coverage,

cloud infrastructure revenue reportedly grew 121% year-over-year to \$7.39 billion, remaining performance obligations reached approximately \$664 billion (up from \$638 billion at the FY2026 year-end print per prior Oracle Investor Relations coverage), and management guided full-year FY2027 revenue to at least \$90 billion. Per 24/7 Wall St. coverage of the after-hours tape, ORCL shares reportedly jumped approximately 7% in extended trading. Per ChartMill coverage carried in the data drop, Oracle also announced a reported \$28.5 billion AI-cloud contract commitment during the print. Per data drop, ADBE reported fiscal Q3 EPS of \$6.13 versus the \$6.20 consensus with revenue at \$6.76 billion; per Investing.com and GuruFocus coverage the print was paired with a Chair-and-CEO transition announcement (Anil Chakravarthy to succeed Shantanu Narayen as President and CEO effective December 1, 2026) and ADBE reportedly closed the after-hours tape approximately $\downarrow$ 2.1%. For FCI positioning, ORCL is not a direct holding but its Q1 print is a marquee incre-

mental data point for the physical-AI-infrastructure axis on which FCI's Growth-Hybrid sleeve reads — AMD (Thu ↓3.36% at \$503.60 per data drop), MRVL (Thu ↓3.43% at \$226.96), NVDA (Thu ↓2.37% at \$218.36), LRCX (Thu ↓5.65% at \$298.01), CRDO (Thu ↓4.53% at \$160.31), TSM (Thu ↓1.68% at \$428.03), KEYS (Thu ↓1.62% at \$325.65), and TEL (Thu ↓0.02% at \$204.63) — and reads directly against the AI-power sleeve (CEG Thu ↓2.70% at \$285.97, VST Thu ↓2.68% at \$147.05) into today's CPI print.

TRADE AXIS: CANADA'S RETALIATORY COUNTER-TARIFFS ENTER THEIR FOURTH DAY PER FINANCE CANADA'S SEPTEMBER 8 EFFECTIVE SCHEDULE — THE APPROXIMATELY C\$27.6 BILLION (~\$19.94 BILLION) PACKAGE APPLIES 15%, 25%, AND 50% DUTIES ACROSS APPROXIMATELY 700 PRODUCT LINES INCLUDING STEEL (50%), DAIRY, APPLIANCES, AND AGRICULTURAL EQUIPMENT; STLD CLOSED THURSDAY AT \$237.08 (↓1.50%), CAT AT \$805.00 (↓1.29%), FAST AT \$49.01 (↑0.45%), AND PCAR AT \$122.57 (↑0.57%) PER DATA DROP; PER SEEKINGALPHA COVERAGE CARRIED IN THE DATA DROP HOLDINGS NEWS, ONE SELL-SIDE PERSPECTIVE FRAMES THE US-CANADA TARIFFS AS COMPLICATING A DIP-BUYING PLAN FOR STEEL DYNAMICS, UNDERSCORING THAT THE CROSS-BORDER COST-STACK REPRICING REMAINS AN ONGOING VARIABLE RATHER THAN A CLEANLY RESOLVED ONE

Per Finance Canada's September 8 effective schedule and prior Al Jazeera and Reuters coverage, Canada's retaliatory counter-tariffs on approximately C\$27.6 billion of US goods remain live in their fourth day, applying duties of 15%, 25%, and 50% across roughly 700 product lines with steel and aluminum at 50% dollar-for-dollar with the corresponding US rates. Per data drop, STLD closed Thursday at \$237.08 (↓1.50%), CAT at \$805.00 (↓1.29%), FAST at \$49.01 (↑0.45%), and PCAR at \$122.57 (↑0.57%). Per SeekingAlpha coverage carried in the data drop holdings news, one sell-side perspective explicitly framed the US-Canada tariffs as complicating a dip-buying plan for Steel Dynamics, underscoring that the tariff pass-through is an ongoing operating-cost variable rather than a cleanly resolved one. For FCI positioning, the composition — a live cross-border counter-tariff schedule in its fourth day sitting alongside the tanker-war oil bid, the ECB hike, and the CPI-and-FOMC window — keeps the Dividend-Strategy names with US-Canada supply chains (STLD, CAT, FAST, PCAR) reading through the intersection of the tariff pass-through variable and the rate-path repricing.

SECTION 03

On Our Radar

1. August CPI Publishes at 8:30 AM ET Today Per the BLS Release Schedule — The Final Direct Consumer-Side Inflation Read Ahead of the September 15–16 FOMC Decision Next Wednesday, With Headline CPI Consensus Approximately ↑0.4% Month-Over-Month and ↑3.4% Year-Over-Year Per Kiplinger and CNBC Coverage, and Core CPI Consensus Ranging From Approximately ↑0.2% Month-Over-Month Per FXStreet to ↑0.4% Month-Over-Month Per Kiplinger Coverage, With the Core Year-Over-Year Consensus at Approximately 2.4% Per Kiplinger; the Yesterday-Released August PPI Landed at ↑0.4% Month-Over-Month in Line With Consensus and ↑5.4% Year-Over-Year Per BLS, With Energy ↑4.2% and Diesel ↑24.1%. Per the BLS release schedule, the August CPI news release publishes Friday September 11 at 8:30 AM ET, sequencing the last direct consumer-side inflation read ahead of the September 15–16 FOMC. Per Kiplinger coverage of the consensus, headline CPI is expected to rise 0.4% month-over-month and 3.4% year-over-year, with core CPI expected up 0.4% month-over-month and 2.4% year-over-year; per FXStreet coverage of a separate consensus, core CPI is expected up 0.2% month-over-month. Per the BLS release of the August PPI on Thursday, final-demand PPI rose 0.4% month-over-month in line with the Dow Jones consensus with the 12-month unadjusted change at ↑5.4%, and energy (↑4.2%) drove more than three-fourths of the goods-side increase with diesel (↑24.1%) alone contributing more than a third. Per CNBC and Polymarket coverage, CME FedWatch September hike odds sit in a range near approximately 56–70% depending on the source into the CPI print, and per Federal Reserve communications policy the FOMC quiet period runs through Thursday September 17. For FCI positioning, the composition — a producer-side print now in the base case, a consumer-side print landing in a single pre-open window, an ECB hike already stamped behind, and the FOMC quiet period holding — concentrates the rate-path repricing risk into a single morning window against a fourth-consecutive-down-day tape.

2. Oracle's Fiscal Q1 2027 Print After the Thursday Close Delivered a Beat on Both the Top and Bottom Lines With Cloud Infrastructure Revenue Reportedly ↑121% Year-Over-Year at \$7.39 Billion, Remaining Performance Obligations Reaching \$664 Billion, and a Full-Year FY2027 Revenue Guide of At Least \$90 Billion Per CNBC, 24/7 Wall St., ERP Today, and Alphastreet

Coverage — With ORCL Reportedly Trading Up Approximately 7% in Extended Trading; Adobe's Fiscal Q3 Print Delivered Revenue of \$6.76 Billion (↑13% Year-Over-Year) and Non-GAAP EPS of \$6.13 Versus the \$6.20 Consensus Per Investing.com and GuruFocus Coverage — With ADBE Reportedly Trading Down Approximately 2.1% in Extended Trading Following a CEO Transition Announcement (Anil Chakravarthy Named as Next President and CEO Effective December 1, 2026). Per CNBC, 24/7 Wall St., ERP Today, and Alphastreet coverage of Oracle's fiscal Q1 2027 print, adjusted EPS reached \$1.92 versus the \$1.74 FactSet consensus and revenue reached \$19.35 billion versus the \$19.14 billion consensus, with cloud infrastructure revenue reportedly up 121% year-over-year to \$7.39 billion, remaining performance obligations reaching approximately \$664 billion, and management guiding full-year FY2027 revenue to at least \$90 billion. Per 24/7 Wall St. coverage of the after-hours tape, ORCL shares reportedly jumped approximately 7% in extended trading. Per Investing.com and GuruFocus coverage of Adobe's fiscal Q3 print, revenue reached \$6.76 billion (up 13% year-over-year) and non-GAAP EPS was \$6.13 versus the \$6.20 consensus, with the after-hours tape reportedly showing shares down approximately 2.1% following an announced CEO transition. For FCI positioning, ORCL is not a direct holding, but the print reads as a marquee incremental data point for the physical-AI-infrastructure axis (AMD, MRVL, NVDA, LRCX, CRDO, TSM, KEYS, TEL, NXPI) and the AI-power complex (CEG, VST) into today's CPI print and next week's FOMC.

3. Chip-Equipment and AI-Networking Sleeve Absorbed a Broad Fade Thursday — Per Data Drop, LRCX Closed ↓5.65% at \$298.01 With Benzinga Coverage Citing a UBS Rating Action, an Insider Sale, and Rising Long-End Yields as the Session Weight; CRDO Closed ↓4.53% at \$160.31 Following Its Goldman Sachs Communacopia + Technology Conference Presentation per SeekingAlpha and Benzinga Coverage of a Director’s Approximately \$644,000 Stock Sale; AMD Closed ↓3.36% at \$503.60, MRVL ↓3.43% at \$226.96 Following Yahoo Finance Coverage Framing Marvell’s Positioning as a Vendor-Neutral AI Networking Supplier, and NVDA ↓2.37% at \$218.36 — While NXPI (↑1.41% at \$226.47) and TEL (↓0.02% at \$204.63) Diverged Higher/Flat Following Their Goldman Sachs and Citi/Jefferies Conference Presentations per SeekingAlpha Coverage Carried in the Data Drop.

Per data drop, the AI-semiconductor-and-networking sleeve absorbed a broad fade Thursday with LRCX (↓5.65% at \$298.01), CRDO (↓4.53% at \$160.31), AMD (↓3.36% at \$503.60), MRVL (↓3.43% at \$226.96), and NVDA (↓2.37% at \$218.36) all trading lower in size against the fourth-consecutive-down-day tape and elevated long-end yields. Per Benzinga coverage carried in the data drop, LRCX weakness was attributed to a UBS rating action, an insider sale, and rising yields; per SeekingAlpha and Benzinga coverage carried in the data drop, CRDO weakness followed a director’s reported approximately \$644,000 sale and coincided with its Goldman Sachs Communacopia + Technology Conference presentation. Per data drop, NXPI (↑1.41% at \$226.47) diverged higher following its own Goldman Sachs presentation, and TEL held near unchanged following its Jefferies Industrials and Citi TMT conference presentations per SeekingAlpha coverage. For FCI positioning, the composition — a chip-equipment and AI-networking drawdown against a physical-AI-infrastructure demand curve now stamped by Oracle’s \$664 billion RPO print — keeps the Growth-Hybrid AI axis reading through the intersection of the CPI print at 8:30 AM ET today and the September 15–16 FOMC.

4. Digital-Asset Sleeve — Per CaptainAltcoin and Fortune Coverage of the Late-Thursday and Early-Friday Bitcoin Tape, Bitcoin Traded in a Range Near Approximately \$77,000 Ahead of Today’s August CPI Print; IBIT Closed Thursday at \$43.68 (↓1.38%) and ETHA at \$18.56 (↓0.11%) Per Data Drop; Per Yahoo Finance Coverage Carried in the Data Drop Holdings News, Crypto Mining Names Reportedly Fell Harder Than Bitcoin on the Risk-Off Tape With HUT ↓5.55% at \$90.60 and MARA ↓4.11% at \$11.43 Per Data Drop Alongside Coverage of Cipher Mining ↓6% and Riot ↓4%; the Composition Keeps the Complex Reading Through the CPI-and-FOMC Sequence. Per

CaptainAltcoin coverage of the Bitcoin tape into today, Bitcoin was trading in a range near approximately \$77,000 ahead of the CPI print; per prior Fortune coverage of the Wednesday PM tape Bitcoin had traded near approximately \$78,137. Per data drop, IBIT closed Thursday at \$43.68 (↓1.38%) and ETHA at \$18.56 (↓0.11%). Per Yahoo Finance coverage carried in the data drop holdings news, crypto mining stocks reportedly fell harder than Bitcoin on the risk-off tape, with the data drop showing HUT ↓5.55% at \$90.60 and MARA ↓4.11% at \$11.43. For FCI positioning, the composition — a Digital-Asset sleeve continuing to absorb the yield-and-hike reprice while the miner layer trades with amplified beta on the risk-off tape — keeps IBIT and ETHA reading through the intersection of the September hike distribution, the Fed quiet period, and the CPI print at 8:30 AM ET today.

5. Copper and Precious-Metals Layer Reset Sharply Thursday — Per Data Drop, FCX Closed ↓6.59% at \$71.21 With Yahoo Finance Coverage Framing a Grasberg Ramp-Up and US Copper Growth From Leaching Story Against the Broader Cyclical Fade, Silver (SLV) Closed ↓5.30% at \$57.50, Gold (GLD) Closed ↓1.73% at \$396.36, and AEM Closed ↓2.91% at \$196.68 — A Composition Reading as a Reversal of the Prior Session's Metals Bid Rather Than a Break of the Physical-World Thesis; Per Yahoo Finance Coverage Carried in the Data Drop Holdings News, an Analyst Note Frames the “Scarcity Trade Starting to Eat the Capital Cycle” as an Ongoing Cross-Cutting Read Across the Copper and Industrials Complex.

Per data drop, FCX closed Thursday at \$71.21 (↓6.59%) after leading the FCI bottom-mover list; per Yahoo Finance coverage carried in the data drop, FCX is reportedly eyeing a Grasberg ramp-up and US copper growth from leaching. Per data drop, SLV closed ↓5.30% at \$57.50 and GLD closed ↓1.73% at \$396.36 in a session that also saw AEM ↓2.91% at \$196.68. Per SeekingAlpha coverage carried in the data drop holdings news for CAT, an analyst framing describes the current scarcity dynamic as pressuring the capital-investment cycle, underscoring that the copper-and-industrials layer continues to read through the intersection of the AI-and-power-buildout demand curve and the cyclical-side fade. For FCI positioning, the composition — a copper-and-precious-metals reset paired with a still-elevated Brent print — keeps the Growth-Hybrid metals sleeve (FCX, AEM) and the physical-supply energy sleeve (CVX, CNX, OKE) reading through the CPI-and-FOMC window rather than requiring a thesis change.

6. Carson's SPY \$645.80 Support Remains Active — Thursday's \$756.64 Intraday Low Left Carson's Level Untouched, With the \$645.80 Level Sitting Approximately 14.8% Below the SPY \$757.83 Cash Close Per Data Drop; No Active Resistance Levels Are on the Book Following the April 14 Major-Zone Breakout of \$691.90–\$693.20. The Data-Drop Fear & Greed Reading of 56 “Greed” Reflects the CNN Endpoint Falling Back to the Crypto Fear-and-Greed Index — Per MacroMicro Coverage of the CNN Stock-Market Read, Treat the Actual CNN Read as Approximately 35 “Fear” for This Brief Following Four Consecutive Down Sessions and the Yield-and-Oil Compound; With the CPI Print at 8:30 AM ET Today and the September 15–16 FOMC Decision Next Wednesday, the Pre-Committed FCI Deployment Discipline Continues to Frame Reactive Positioning.

Per levels.json, Carson's active SPY support at \$645.80 remained untouched through Thursday's \$756.64–\$760.11 SPY intraday range per data drop and sits approximately 14.8% below the last cash close at \$757.83. No active

resistance levels are on the book following the April 14 breakout of the \$691.90–\$693.20 major zone (both hit that session). With CPI at 8:30 AM ET today, the September 15–16 FOMC decision next Wednesday, and the ECB hike already stamped behind, the pre-committed FCI deployment discipline (70% of reserves at –25% drawdown, remaining 30% at –40%) continues to frame reactive positioning against any single-session gap through the multi-catalyst window. Note: the data drop Fear & Greed reading of 56 “Greed” reflects the CNN endpoint falling back to the crypto Fear-and-Greed index; per MacroMicro coverage of the CNN stock-market read, the actual reading sits near approximately 35 “Fear” following four consecutive down sessions and the yield-and-oil compound.
