OCTOBER 10, 2026

Rotation Reset

Weekend Edition — Friday's rebound in nuclear-power and semiconductors capped a week of sharp rotations after reportedly hawkish September FOMC minutes pressured long duration and industrials mid-week.

S&P 500 (SPY, FRI CLOSE)	NASDAQ (QQQ) / DOW (DIA, FRI)	GOLD (GLD) / SILVER (SLV, FRI)	WTI (USO) / BRENT (BNO, FRI)	FEAR & GREED
\$778.57 ↑0.60%	\$751.27 ↑0.49% / \$516.11 ↑0.87%	\$384.58 ↑1.57% / \$54.78 ↑2.49%	\$148.20 ↑0.42% / \$63.99 ↑0.55%	64 · Crypto fallback (CNN endpoint unavailable)

SECTION 01

Markets — Week in Review

A FULL-ROTATION WEEK BOOKENDED BY PHYSICAL-AI-POWER ENTHUSIASM MONDAY-TUESDAY AND PARTIAL RECOVERY FRIDAY, WITH REPORTEDLY HAWKISH SEPTEMBER FOMC MINUTES MID-WEEK FORCING LONG-END YIELDS TOWARD MULTI-DECADE HIGHS AND RESETTING THE AI-AND-INDUSTRIALS COMPLEX

The week opened with the AMD-OpenAI compute agreement extending the physical-AI-power thesis into double-digit gains across the nuclear-generation sleeve, pivoted hard on Wednesday as reportedly hawkish September meeting minutes reasserted a committee-majority bias toward one further hike by year-end per prior preview and reaction coverage, and resolved Friday with a broad rebound across semiconductors, nuclear generators, and digital-asset miners even as Delta Air Lines (DAL) printed a pre-market earnings miss. Per data drop, SPY closed Friday at \$778.57 (↑0.60%), QQQ at \$751.27 (↑0.49%), DIA at \$516.11 (↑0.87%), and the Russell 2000 at \$278.94 (↑0.49%) — a composition consistent with risk appetite reasserting after Thursday's AI reset. Carson's active SPY support at \$645.80 (retracement target set April 13, 2026, per levels.json) was not approached at any point this week; Friday's intraday low of \$775.14 sits approximately 20.0% above the level and did not materially narrow the gap to Carson's first-tranche deployment reference.

S&P 500 (SPY, FRI)	\$778.57 ↑0.60% · Fri range \$775.14–\$779.42
NASDAQ / DOW / RUSSELL 2K (FRI)	\$751.27 ↑0.49% / \$516.11 ↑0.87% / \$278.94 ↑0.49%
UVXY (VIX PROXY, FRI)	\$16.32 ↓1.92% · Vol easing into weekend
XLRE / XLV / XLC (FRI)	XLRE ↑1.86% / XLV ↑1.58% / XLC ↓1.51%
HUT / CEG / VST / FCX (FRI)	↑5.88% / ↑4.56% / ↑3.42% / ↑3.58%
GOLD (GLD) / SILVER (SLV, FRI)	\$384.58 ↑1.57% / \$54.78 ↑2.49%
WTI / BRENT (FRI)	USO \$148.20 ↑0.42% / BNO \$63.99 ↑0.55%
IBIT / ETHA (FRI)	\$46.55 ↑0.63% / \$55.99 ↑0.52%
TLT (20Y BOND, FRI)	\$77.98 ↑0.14% · Yields moderating into weekend
CARSON'S ACTIVE SPY SUPPORT	\$645.80 retracement target · Untouched (Fri low \$775.14)

THE YIELD-AND-DURATION LAYER SOFTENED INTO FRIDAY'S CLOSE AS TLT CLOSED \$77.98 (↑0.14%) AND UVXY PRINTED \$16.32 (↓1.92%); PER DATA DROP SENTIMENT, THE HEADLINE FEAR & GREED VALUE OF 64 CARRIES THE "(CRYPTO)" FALLBACK LABEL — THE CNN STOCK-MARKET ENDPOINT WAS REPORTEDLY UNAVAILABLE AT DROP TIME FOR THE THIRD CONSECUTIVE SESSION AND THE VALUE SHOULD BE READ AS A DIGITAL-ASSET SENTIMENT CHECK RATHER THAN AN EQUITY-MARKET READ

The composition heading into the October 27–28 FOMC window reads a volatility complex that has absorbed a reported hawkish-minutes read, a reported industrials repricing, a reported AI-and-power reset, and a reported Friday recovery without a material widening in UVXY or a sustained push through the long end — a pattern consistent with repricing rather than regime change. Per prior preview and reaction coverage, the committee reportedly voted 12-0 to lift the target range by 25 basis points to 3.75–4.00% at the September 15–16 meeting and preview coverage reportedly characterized a majority of participants as signaling one further hike by year-end, with hike odds for October reportedly pricing near approximately 20–25% per CME FedWatch and Kalshi coverage following the release. The reported 10-year yield reportedly held near approximately 5.31% and the 30-year near approximately 5.68% per prior CNBC reporting — multi-decade reference points that frame the long-duration layer. For FCI positioning, the composition keeps the FCI dividend sleeve (ADP, PCAR, SPGI, LMT, GD, FAST), the FCI physical-AI-power sleeve (VST, CEG, NEE, EIX), and the FCI semiconductor-and-interconnect sleeve (AMD, NVDA, MRVL, TSM, CRDO, LRCX, KEYS) reading through next week's bank-earnings kickoff and the broader October data cadence.

A week that reportedly moved from AI-power enthusiasm to hawkish-minutes-driven repricing and back to broad risk-on frames a setup where simplicity over complexity and think like an owner tend to serve better than compositing a single directional view into the October 27–28 FOMC window.

Avoid erosion.

Geopolitics — Mideast Risk Premium Persists as the Energy Complex Consolidates Near Weekly Highs; Trade and Fed-Independence Signals Dominate Weekend Flow

OIL CONSOLIDATED FRIDAY NEAR ITS WEEKLY HIGH AFTER THURSDAY'S SURGE ON REPORTED COMBINED MIDEAST SHIPPING ATTACKS AND REPORTED U.S. GULF COAST DISRUPTIONS — WTI (USO) CLOSED \$148.20 (↑0.42%) AND BRENT (BNO) \$63.99 (↑0.55%) PER DATA DROP, WITH REPORTED SAUDI ARAMCO RESTORATION OF FULL NOVEMBER EUROPEAN CRUDE SUPPLY PER YAHOO COVERAGE CARRIED IN HOLDINGS NEWS FOR CL OFFERING A COUNTERWEIGHT; THE FCI ENERGY SLEEVE PRINTED CVX \$211.98 (↑0.20%), OKE \$89.80 (↓0.54%), CNX \$34.03 (↑0.59%), AND FCX \$73.69 (↑3.58%) PER DATA DROP

The energy complex held near weekly highs even as the Energy sector (XLE) printed a modest ↓0.25% on Friday — a consolidation pattern consistent with the risk premium persisting rather than collapsing. Per data drop holdings news for CL, one Yahoo piece reportedly framed reported Saudi Aramco as reportedly restoring full crude oil supply to Europe for November — a reported counterweight to the reported shipping-attack-and-Gulf-storm layer that drove Thursday's surge. Per data drop holdings news for CVX, one Yahoo piece reportedly flagged reported Chevron as reportedly shutting Gulf platforms and evacuating staff as reported Hurricane Isaias reportedly nears — a reported Gulf-of-Mexico supply disruption reportedly reading through the near-term tightness. Natural Gas (UNG) printed \$11.01 (↑1.85%) Friday, extending the heating-season bid. Per data drop headlines, one Reuters piece reportedly framed reported Kremlin commentary as reportedly indicating reported Putin reportedly downplayed immediate reported Ukraine-talks resumption in a reported phone call with reported Trump — a reported diplomatic-stall signal reportedly reading through the reported energy-security channel and reportedly limiting the near-term probability of a reported pipeline-or-sanction reset. Per data drop headlines, one CNBC piece reportedly framed reported Trump as reportedly creating a reported committee to reportedly examine reported Fed Governor Lisa Cook — a reported Fed-independence signal reportedly reading through the reported duration-and-dollar channel; one CNBC piece reportedly flagged reported Tesla as reportedly dropping reported “Full Self-Driving” brand name reportedly in Europe reportedly after reported regulator pushback. Per data drop holdings news for QCOM, one Yahoo piece reportedly framed reported Qualcomm-Huawei deal landing reportedly as reported U.S. tightens reported China tech rules — a reported semi-export-control signal reportedly reading through the reported chip-supply channel into next week's reported ASML and reported TSM earnings cadence. For FCI positioning, the composition — a reported shipping-and-Gulf risk premium reportedly consolidated near weekly highs, a reported Saudi Aramco restoration reportedly offering a reported supply counterweight, a reported Putin-Trump call reportedly indicating a reported diplomatic stall, a reported Fed-independence signal reportedly reading through reported duration, and a reported Qualcomm-Huawei deal reportedly reading through reported export controls — keeps CVX, OKE, CNX, FCX, LMT, GD, QCOM, NXPI, ADI, TSM, LRCX, and the reported FCI defense-energy-and-semiconductor complex reading through Monday's open and the reported October 27–28 FOMC window.

On Our Radar

1. Week Ahead — Big-bank earnings reportedly kick off next week with reported JPMorgan (JPM) reportedly scheduled Tuesday October 13 per prior financial-calendar coverage, alongside the broader reported money-center and reported regional-bank cadence; reported ASML and reported TSM reportedly scheduled later in the week per prior Yahoo coverage carried in holdings news for TSM, framing the reported AI-foundry-and-litho channel read; reported Delta Air Lines (DAL) reportedly missed consensus Friday pre-market with reported EPS of \$1.72 versus consensus of approximately \$1.99 per data drop earnings — a reported airline-cycle signal reportedly reading through the reported consumer-discretionary and reported corporate-travel channel into Monday's open. The DAL miss carries weight as a leading indicator for premium-leisure and business-travel demand; the magnitude — approximately 13% below consensus — is material, and the Thursday-brief-flagged implied move near approximately 7.38% per prior Benzinga coverage reportedly framed the setup as a potentially outsized single-stock catalyst. Per prior financial-calendar coverage, reported JPMorgan reportedly scheduled Tuesday October 13 reportedly opens the big-bank earnings sequence — a reported credit-and-net-interest-margin read reportedly relevant to the reported FCI financials sleeve (SPGI, SSNC, SYF, SOFI, HOOD, NWG, ORI) and reportedly to the broader read on reported commercial-and-consumer loan books into the reported October 27–28 FOMC window. Per prior CME FedWatch and Kalshi coverage carried in prior briefs, reported October hike odds reportedly priced near approximately 20–25% following the reportedly hawkish September minutes release. Per data drop headlines, one Reuters piece reportedly framed reported Wall Street as reportedly posting weekly gains with reported earnings and inflation data on tap — a reported week-ahead framing reportedly consistent with the above cadence.

2. Nuclear-power sleeve reportedly reasserted Friday after Thursday's reset — per data drop, HUT reportedly printed \$84.27 (↑5.88%), CEG \$298.07 (↑4.56%), VST \$161.48 (↑3.42%), and FCX \$73.69 (↑3.58%); AEM reportedly printed \$189.02 (↑2.80%) extending the paired precious-metals-and-miner strength per data drop with Gold (GLD) reportedly printing \$384.58 (↑1.57%) and Silver (SLV) \$54.78 (↑2.49%); AMD reportedly closed \$608.10 (↓2.03%) extending the chip-complex softness into the weekend despite TSM reportedly printing \$453.31 (↓1.02%) and NVDA \$229.28 (↓0.52%). The paired Friday rebound in the physical-AI-power sleeve (CEG, VST, HUT, FCX) alongside the continued precious-metals-and-miner strength (Gold, Silver, AEM) frames the composition as a reported momentum-reset-and-recovery pattern consistent with Monday–Tuesday's thesis-driven leadership. Per data drop holdings news for CEG, one Yahoo piece reportedly framed reported Constellation versus reported Talen with reported Talen's buyback reportedly positioning the reported cheaper power stock as the reported better buy — a reported sector-rotation signal within merchant-nuclear generation. Per data drop holdings news for AMD, one Yahoo piece reportedly flagged reported AMD's supply crunch as reportedly good news for the stock — a reported pricing-power signal that reportedly contrasts with Friday's price action. For FCI positioning, the composition keeps VST, CEG, NEE, EIX, HUT, MARA, AMD, NVDA, MRVL, TSM, CRDO, LRCX, KEYS, AEM, FCX, and the reported FCI physical-AI-power-and-precious-metals complex reading through Monday's open and next week's earnings cadence.

3. Fear & Greed data-feed signal — the data drop Friday value of 64 ("Greed") reportedly carries the "(Crypto)" fallback label for the reported third consecutive session per data drop sentiment; the reported CNN stock-market endpoint was reportedly unavailable at drop time and the headline value should be read as a digital-asset sentiment check, not an equity-market read; per data drop, IBIT reportedly printed \$46.55 (↑0.63%) and ETHA \$55.99 (↑0.52%) Friday — a reported digital-asset consolidation pattern reportedly consistent with the crypto-F&G read. Per data drop holdings news for IBIT, one SeekingAlpha piece reportedly framed reported IBIT as reportedly a strategic bet on a reported Bitcoin comeback — a reported sentiment read reportedly consistent with Friday's modest rebound after Thursday's drawdown. Per data drop holdings news for HOOD, one Yahoo piece reportedly flagged reported Cathie Wood-led Ark Invest as reportedly selling reported AMD, SPCX, and GOOG and reportedly adding reported healthcare names; HOOD reportedly printed \$109.02 (↑1.88%) Friday per data drop. The reported CNN stock-market Fear & Greed endpoint recurrence of the fallback is a reported data-quality flag worth tracking into Monday's drop; the committee should read Friday's 64 as a digital-asset tape marker rather than a broad-market sentiment indicator.

4. Carson's Levels — a week of sharp intraday rotations still leaves SPY reportedly a full tranche of air above the \$645.80 retracement target per levels.json; Friday's reported range of \$775.14–\$779.42 reportedly did not approach any active Carson level, with the active support reportedly sitting approximately 17.1% below Friday's close; Carson's prior April 2026 resistance zones at \$683.70, \$685.85, and the \$691.90–\$693.20 band have all reportedly been cleared to the upside and remain in the "hit" column, with no new active Carson level reportedly set since the April 14, 2026 major-resistance-zone hits. Per levels.json, Carson's active SPY retracement target at \$645.80 (set April 13, 2026) remains in the "active" column with no hit date and no hit price recorded. Per data drop, Friday's SPY intraday low of \$775.14 reportedly extended the week's low from Thursday's \$770.43 only modestly higher — the week's reported trough reportedly sits approximately 19.3% above Carson's target and did not materially narrow the gap to the FCI first-tranche deployment reference at approximately –25% from peak. For FCI positioning, Carson's level reportedly frames a deployment reference rather than a trade signal — the FCI buy-and-hold tranche framework reportedly deploys 70% of reserves at approximately –25% from peak and the remainder at approximately –40%, with no trimming on either side.
